

CLAIMS

1. A liquid crystal aligning agent comprising a polyimide precursor having a structural unit represented by the formula (1) and having a volume resistivity of 5 from 1×10^{10} to 1×10^{14} Ωcm when formed into a film, and a polyimide precursor having a structural unit represented by the formula (2-1) or a polyimide having a structural unit represented by the formula (2-2):

10 in the formula (1), R represents a hydrogen atom or an alkyl group, X represents a tetravalent organic group, and A represents a bivalent organic group,

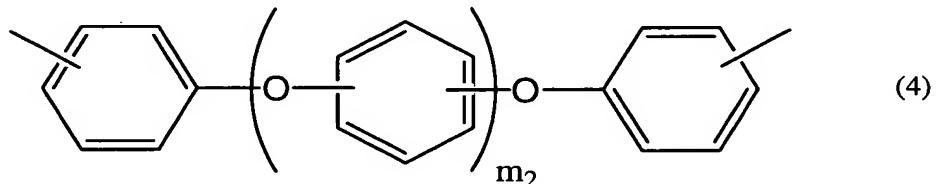

in the formulae (2-1) and (2-2), R represents a hydrogen atom or an alkyl group, Y represents a tetravalent organic group, B represents a bivalent organic group, and
 5 from 10 to 100 mol% of B is a bivalent organic group having any one of the following structures (3) to (5) in its structure, or a paraphenylene group:

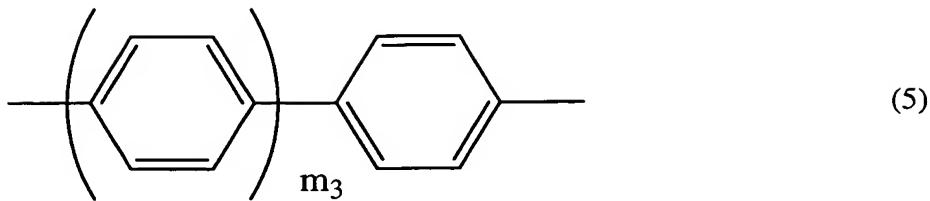

in the formula (3), m_1 is an integer of from 2 to 18,

10

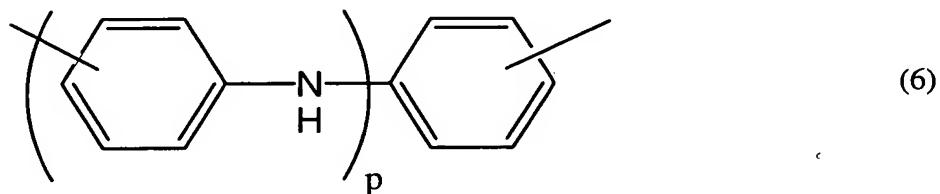

in the formula (4), one or a plurality of optional hydrogen atoms on the benzene rings may be substituted by a monovalent organic group other than a primary amino group, and m_2 is an integer of from 1 to 8,

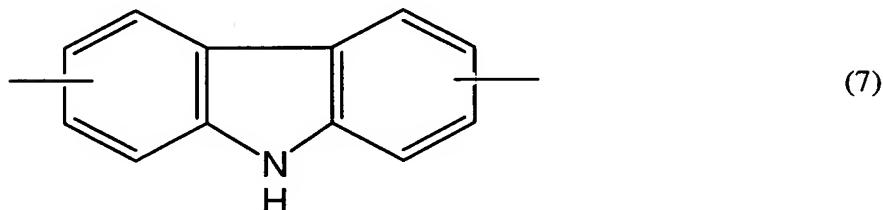

in the formula (5), one or a plurality of optional hydrogen atoms on the benzene rings may be substituted by a monovalent organic group other than a primary amino group, and m_3 is an integer of from 1 to 4.

2. The liquid crystal aligning agent according to Claim 1, wherein from 10 to 100 mol% of A in the formula (1) is a bivalent organic group having a nitrogen atom.

3. The liquid crystal aligning agent according to Claim 1, wherein from 10 to 100 mol% of A in the formula (1) is a bivalent organic group having the following structure (6) or (7):

in the formula (6), p is an integer of from 1 to 5,

15

4. The liquid crystal aligning agent according to any one of Claims 1 to 3, wherein from 20 to 100 mol% of X in the formula (1) is a tetravalent organic group having an

alicyclic structure or a tetravalent organic group having an aliphatic structure.

5. The liquid crystal aligning agent according to any one of Claims 1 to 4, wherein from 20 to 100 mol% of Y in 5 the formula (2-1) or (2-2) is a tetravalent organic group having an aromatic structure.

6. The liquid crystal aligning agent according to any one of Claims 1 to 5, wherein the polyimide precursor having a structural unit represented by the formula (1) 10 is contained in an amount of from 10 to 95 wt% based on the total amount of said polyamide precursor and the polyimide precursor having a structural unit represented by the formula (2-1) or the polyimide having a structural unit represented by the formula (2-2).

15 7. A liquid crystal display device obtained by using the liquid crystal aligning agent as defined in any one of Claims 1 to 6.
